

Technology for the 21st Century Campus

Tech adoption has never been more critical for higher education.

If you are ready to take collaboration on your campus to the next level, MultiTaction has best-in-class experience and the solutions to take you there.

Higher education is a competitive landscape. Prospective students have more choices than ever when it comes to higher education options. With education costs in the US continuing to rise, students are being very selective about where they choose to invest their time and money. Academic institutions need to improve their digital technology as the digitally savvy students of Gen Y and beyond have grown up with digital technology as a critical part of their learning process.

Providing higher education with opportunities to enhance student experience, attract top faculty and stand out from the crowd is where MultiTaction goes to the top of the class. MultiTaction solutions are used in more than 50 higher education institutions around the world and are used throughout campuses.

- **In classrooms**

- fostering collaborative learning
 - promoting distance learning
 - enhancing curriculum

- **On campus**

- galvanizing a sense of community
 - providing multi-media integration in libraries and research centers
 - personalizing prospective student visits
 - showcasing achievements to donors and alumni

MultiTaction solutions provide highly engaging learning experiences that better suit the way the learners of today absorb and apply information.

- Interactive displays. Scale to any size and configuration, including curves and right angles, while responding to unlimited touches by fingers, infrared pens and Codice markers with real-time response.
- Canvas Collaboration software. Connect in real-time, present ideas and solve problems using live data.
- Showcase Presentation software. Touch and go interactivity combined with the intuitive design interface makes creating custom content in-house a memorable user experience.

MultiTaction is used by academic institutions world-wide to engage, delight, entertain and present content to foster collaborative learning and creating lasting impressions.

The University of Nebraska Medical Center (UNMC) has a curved iWall running in its state-of-the-art iEXCEL center. A second iWall in the Scottsbluff satellite campus allows students in both locations to collaborate in real time.

The Center for the Future of Surgery at University of California, San Diego contains a 3x3 MultiTaction video wall, which ties together multiple video and computer sources and allows surgical teams to plan, review, and collaborate in real-time.

At Trinity University, the MultiTaction touch table in the Admissions Office Welcome Center enables students to explore courses and facilities with a range of preprinted codice cards that activate content when placed on the table.

Students at Queensland University using "the Cube", which was created using 40 MultiTaction displays, to test drive new applications, ranging from physics simulations to a virtual dive in the Great Barrier Reef.
