

Canvas 3.16 redefines touch interactive visual collaboration for today's needs

Now the world's most advanced touch interactive visual collaboration software is putting even more power at the fingertips of users while further simplifying user interaction. Canvas 3.0 supports new ways of working and enables the spontaneous nature of collaboration by making it easier than ever to invite hands-on interaction from participants across the hall or across the world, while retaining meeting progress and sharing the insights generated from meetings in an organized way.

KEY NEW FEATURES

- Control access to canvases for individuals and groups across your organization
- Utilize SAML for single sign on
- Optimized UI for easy interaction whether using a small laptop or a big video wall
- Invite other users to join a canvas instantly

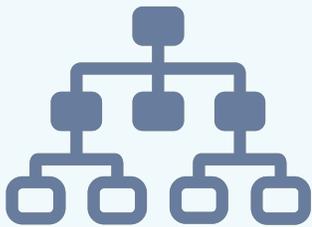

Send a link inviting participants anywhere in the world to join your canvas for remote touch interaction

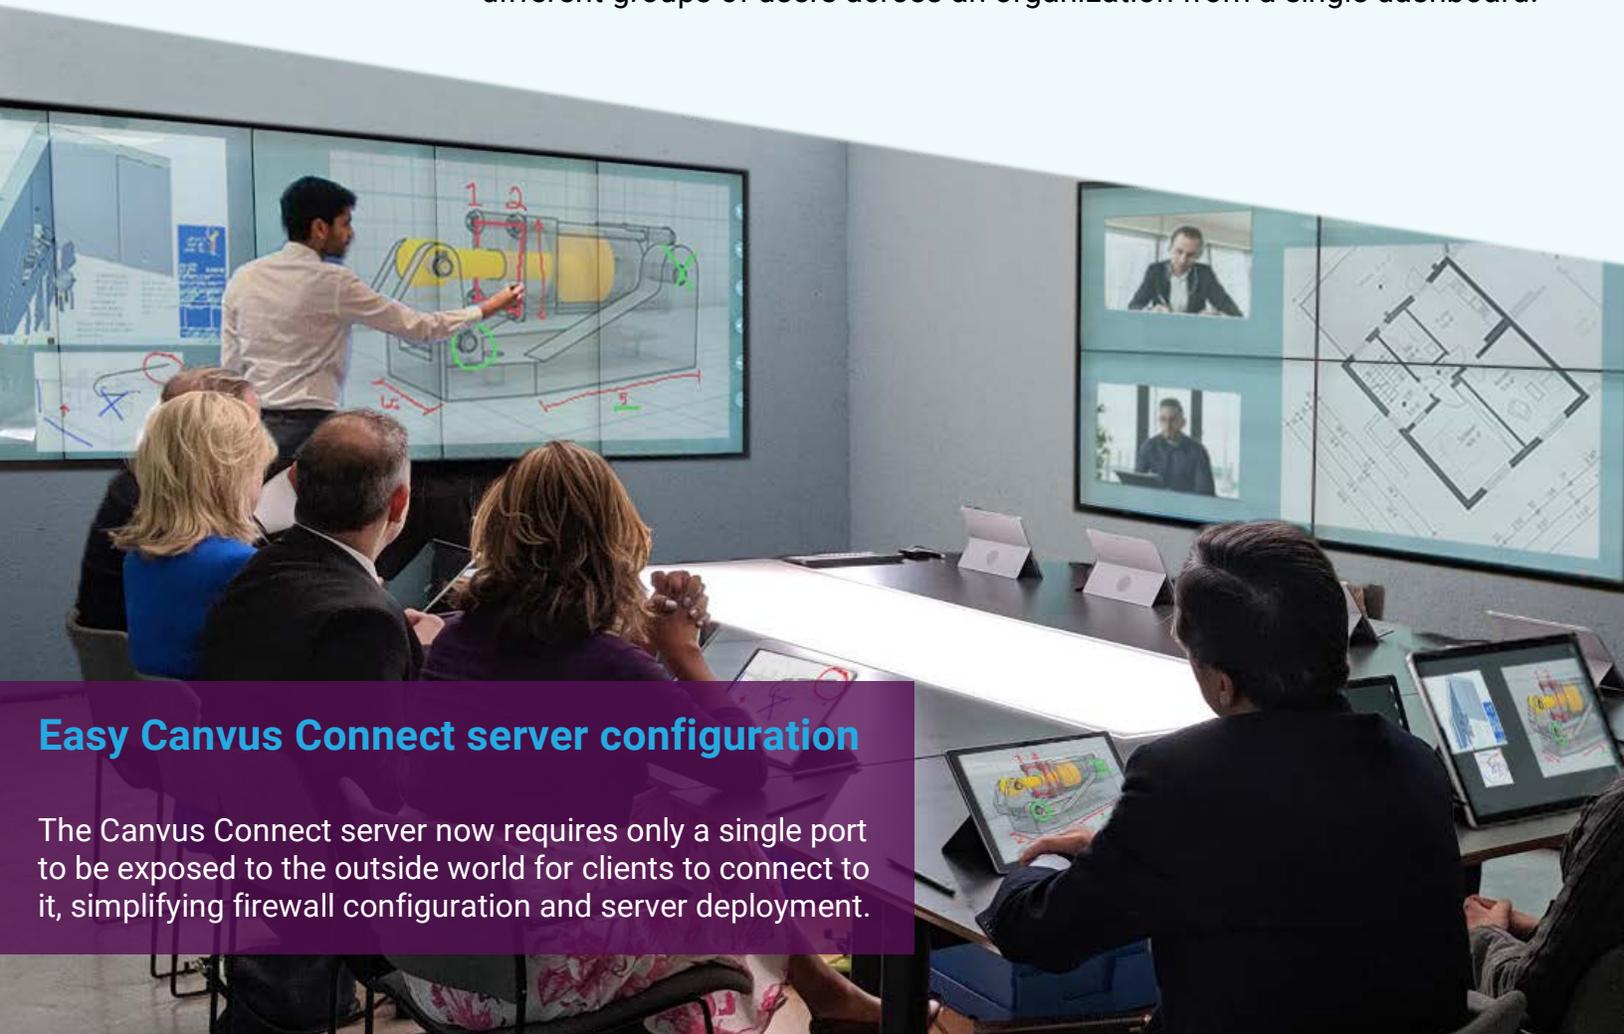

During a collaboration session users can now easily email an invite to meeting participants elsewhere in the building, working from home, in a client's office, or anywhere from any laptop, tablet, or video wall with Canvas installed. With just a touch you can send a link out for others to instantly join your session for real-time interaction just as if they were in the same room.

Manage and control access across your organization

Different teams within an organization want to use a video wall for different purposes but their saved content may not always be intended for other teams to view or modify. While any user can still walk up to a video wall and start a Canvas session, Canvas 3.0 gives you control of who can access your individual canvases. Now you can manage access and editing rights for different groups of users across an organization from a single dashboard.

Easy Canvas Connect server configuration

The Canvas Connect server now requires only a single port to be exposed to the outside world for clients to connect to it, simplifying firewall configuration and server deployment.

ADDITIONAL FEATURES

SINGLE SIGN ON

Users can authenticate to Canvas 3.0 with SAML through an identity provider (IDp) of your choice so nobody needs to remember a new username or password. To skip entering credentials with a keyboard, Canvas 3.0 also allows authentication using a mobile device by scanning a QR code on the screen.

PERSISTENT WEB BROWSER SESSIONS

Web browser sessions on each canvas now persist for each user so there's no need to re-login to any web services you use within Canvas. Additionally, the starting page and default search URL for web browsers can now be configured in the Canvas client.

NEW WEB DASHBOARD

The new web UI for Canvas Connect server allows users to manage access control of their canvases, maintain their personal access tokens for REST API, manage user groups, configure server settings, manage their server license, and access an audit event log which records users' actions on the server.

ENHANCED COPY/PASTE

Use CTRL-C/CTRL-V with a physical keyboard, undo/redo text entered in input fields, and improved text selection.

NEW USER INTERFACE

The interface has been optimized to make Canvas even easier to use on a video wall, laptop, or any standard device using fingers or mouse and keyboard. Improved keyboard focus makes it easier to use both the virtual and physical keyboard. Windows Tablet mode settings are now supported for devices with detachable keyboards.

WELCOME SCREEN & DEFAULT CANVUS

The new welcome screen improves workspace state management and users can now specify a default canvas for each client that is accessible from the welcome screen.

ADDITIONAL ENHANCEMENTS

 With updates to nearly every facet of of the platform, there are far more enhancements to explore in Canvas 3.0 than have been described here. Download the update today and access detailed documentation on the full list of improvements at apps.multitaction.com.

With version 3.16, Canvas is even more powerful, customizable, and easy-to-use than ever. Whether running Canvas on a state-of-the-art MultiTaction optical-touch video wall or on standard touch devices, version 3.16 puts the full limits of the human imagination at the fingertips of users and gets in-person and remote teams onto the same page for more intuitive and productive collaboration.
